

Data Engineer - Analytics Platform

SignalLoop adaptive-builder sample JD

Role Overview

We are hiring a Data Engineer to build reliable analytics pipelines for revenue, product usage, and operational reporting across Snowflake and BigQuery environments.

Responsibilities

Own SQL transformations, Airflow orchestration, dbt models, data quality checks, dashboard reliability, lineage documentation, and incident debugging for broken data workflows.

Required Skills

Advanced SQL, Airflow, dbt, Snowflake, BigQuery, dimensional modeling, data quality testing, pipeline observability, stakeholder communication, and AI-assisted debugging.

Experience

4 to 6 years of data engineering experience with production ownership of batch pipelines and analytics models.

Assessment Signals

We want to test logical reasoning, debugging, systems thinking, chaos tolerance, trade-off judgment, and communication quality.
