

Frontend Platform Engineer

SignalLoop adaptive-builder sample JD

Role Overview

We are hiring a Frontend Platform Engineer to own reusable React and TypeScript components, form patterns, accessibility improvements, frontend performance, and Playwright coverage for a B2B SaaS product.

Responsibilities

Build and maintain design-system components, improve Core Web Vitals, partner with backend engineers on API contracts, harden complex forms, and raise test quality across critical user workflows.

Required Skills

React, TypeScript, component architecture, accessibility, frontend performance profiling, form validation, REST API integration, Playwright, test design, and pragmatic AI-assisted engineering.

Experience

5 to 7 years of frontend engineering experience, including ownership of shared UI platforms or high-traffic product surfaces.

Assessment Signals

We want to test debugging, systems thinking, trade-off judgment, communication quality, and critical AI usage in realistic frontend work.
