

Senior Backend Engineer - AI Infrastructure

Company: SignalLoop SampleCo

Location: Remote / Hybrid

Employment Type: Full-time

Role Overview

We are hiring a Senior Backend Engineer for an AI infrastructure team. The role requires Python, FastAPI, The team builds internal control-plane APIs for provisioning model-serving workloads. We need engineers w

Responsibilities

- Build and maintain Python FastAPI services for internal platform workflows.
- Design predictable REST APIs with clear validation, error handling, and authorization behavior.
- Protect tenant boundaries across teams and organizations.
- Write meaningful pytest coverage for public behavior, edge cases, and regressions.
- Collaborate with platform engineers on deployments, monitoring, and Kubernetes-operated services.
- Use AI tools responsibly for debugging, test design, and implementation support while verifying outputs

Required Skills

- Python 3 and FastAPI
- REST API design and API contracts
- Authorization, ownership isolation, and multi-tenant data safety
- Input validation, state transitions, and error handling
- PostgreSQL-backed workflows
- Reliability, observability, and production debugging
- Pytest and regression test design
- Responsible AI-assisted engineering practices

Nice To Have

- Kubernetes basics and deployment workflows
- Redis caching or background jobs
- Experience with model-serving or AI infrastructure control planes

Assessment Expectation

This JD should generate an invite-ready Advanced FastAPI adaptive blueprint. Kubernetes and deeper infras
